

OpenCart Manual Testing Execution Report

Report Details

Field	Value
Project Name	OpenCart Web Application
Report Date	November 30, 2025
Test Type	Functional Testing (UI, Shopping Cart, Search, Homepage, Currency, Checkout)
Reporting Period	Full Test Cycle

Testing Team

Role	Members
Test Lead	Nagham Ahmed Mahmoud Saed
Team Member	Ahmed Gamal Hassan Ali Ghoneim
Team Member	Kareem Fareed Abd-Elrahman Fahmy
Team Member	Jana Mohamed El-Fateh Mohamed
Team Member	Alaa Ahmed Tolba Ashmawy
Team Member	Doha Ramadan Salah El-Khedewy

1. Executive Summary

This cycle focused on the core functional stability of the OpenCart application.

Metric	Result
Total Test Cases	102
Passed	98
Failed	4
Pass Rate	96.1%
Priority Distribution	High (48) / Medium (41) / Low (13)

Overall Conclusion:

The system performed stably overall. Core functionalities such as user access control, shopping cart operations, and basic UI navigation are working correctly. Out of 102 test cases, 4 critical defects were identified, primarily concentrated in the data validation logic of the checkout and search functionalities. It is recommended to prioritize fixing these high-priority defects immediately.

2. Detailed Results Analysis

2.1 Statistics by Functional Module

Module	# of Cases	Passed	Failed	Pass Rate	Key Test Areas
UI / General Navigation	19	19	0	100%	Footer Link Access Control, Page Loading
Shopping Cart (SC)	40	39	1	97.5%	Add/Remove/U pdate, Coupons, Stock, Price Calculation
Search (SR)	11	9	2	81.8%	Keywords, Categories, Advanced Search, Error Handling
Homepage (HP)	11	11	0	100%	Navigation, Responsiveness, Functional Components
Currency (CU)	11	11	0	100%	Currency Switching, Formatting, Persistence, Calculation
Checkout (CO)	10	9	1	90%	Address, Payment, Order Confirmation, Error Validation
TOTAL	102	98	4	96.1%	

3. Identified Defects Summary

A total of 4 functional defects were found, with 2 categorized as High Priority.

Defect ID	Related TC	Module	Priority	Brief Description	Severity
BUG-001	TC_CO_02	Checkout	High	Checkout proceeds successfully when the postcode field is left blank. Critical data validation logic error that could lead to shipping issues.	Critical
BUG-002	TC_SR_06	Search	Medium	"Search in	Major

Defect ID	Related TC	Module	Priority	Brief Description	Severity
				Product Descriptions" feature is failing. Results are not returned based on keywords found in product descriptions.	
BUG-003	TC_SR_07	Search	Low	Inconsistent status for search with special character "\$" (marked as "Pass" but potentially indicates a data/result filtering issue). Requires further investigation.	Minor
BUG-004	TC_SC_39	Shopping Cart	Medium	Ambiguous handling of non-numeric input (e.g., "ABC") in the cart quantity field. The test passed, but the expected result states "system should reject input with an error," which may contradict the "Pass" status. Needs review.	Major

Key Issues Focus:

1. **BUG-001** is the most critical issue. It compromises the integrity of the checkout process and could generate erroneous orders.
2. **BUG-002** impacts user experience, rendering part of the advanced search functionality

unusable.

4. Module Performance Assessment

-  **Excellent Performance (100%):**
 - UI / General Navigation & Homepage (HP).
 - Currency (CU): All passed, confirming currency switching and calculation work perfectly.
-  **Good Performance (90%+):**
 - Shopping Cart (SC): High pass rate; core add/remove/update, coupon, and synchronization features are stable.
 - Checkout (CO): Apart from one critical defect, other processes (address, payment, order confirmation) are functioning normally.
-  **Needs Attention (81.8%):**
 - Search (SR): Lowest pass rate. Contains a functional failure and issues with edge-case handling. Recommend allocating more resources for fixes and improvements.

5. Recommendations & Next Steps

1. **Immediate Fix:** Prioritize fixing **BUG-001 (TC_CO_02)**. This defect directly impacts order data integrity and business operations and must be resolved in the next release.
2. **Functional Fix:** Schedule a fix for **BUG-002 (TC_SR_06)** to ensure the advanced search feature is fully functional.
3. **Review & Clarification:**
 - Review the actual behavior of **BUG-004 (TC_SC_39)** and **BUG-003 (TC_SR_07)** to confirm if it's a test data/expectation issue or a genuine logic defect.
4. **Regression Testing:** After fixing the above defects, perform comprehensive regression testing on the affected modules (Checkout and Search).
5. **Test Expansion:** Consider adding more test cases for performance, security, and cross-browser compatibility.

6. Conclusion

This manual test execution successfully validated the main functional modules of the OpenCart system. The system performs excellently in user interface, core shopping flow, currency management, and homepage functionality, demonstrating high stability. However, defects requiring immediate attention were found in data validation rigor (specifically in checkout) and specific search functionality. Upon fixing the high-priority defects outlined in this report, the system will be ready for release to a production environment.
