

OpenCart Automation - Test Completion Report (v1.0)

1. Project & Testing Scope Overview

This report confirms the successful completion of the testing cycle for the OpenCart Automation Project, Version 1.0.

Information	Details
Project Name	OpenCart Automation
Version	1.0
Report Date	November 29, 2025

Testing Coverage

The testing effort spanned four critical domains:

- **Functional Testing (UI):** Manual execution of **108** User Interface test cases.
- **API Testing (Automated):** Automated verification of **156** critical API endpoints.
- **Database Testing:** Validation of **40** database transactions and integrity constraints.
- **Performance Testing:** Basic load testing (using JMeter) conducted on key user flows.

Project Team

Role	Name
Team Leader	Nagham Ahmed Mahmoud Saed
Team Member	Ahmed Gamal Hassan Ali Ghoneim
Team Member	Kareem Fareed Abd-Elrahman Fahmy
Team Member	Doha Ramadan Salah El-Khedewy
Team Member	Alaa Ahmed Tolba Ashmawy
Team Member	Jana Mohamed El-Fateh Mohamed

2. Exit Criteria Status

The project meets the primary release criteria, but a critical defect prevents full sign-off.

Criteria	Status	Indicator	Comments
All Critical Test Cases Passed	Met		Core user flows (Checkout, Login) are functional and stable.
Code Coverage > 80%	Met		High code coverage achieved across both API and UI test suites.
No Critical Open Defects	Not Met		CRITICAL: Database constraint issues remain unaddressed (Negative tests failed).
CI/CD Pipeline Passing	Met		Build and unit tests pass consistently in the Continuous Integration environment.

3. Residual Risks (High Priority)

The following outstanding issues must be resolved to ensure long-term system health:

Database Integrity Risk

The system currently accepts invalid data (e.g., negative prices, missing required fields). This lack of validation poses a significant threat to data quality and reliability.

● API Error Handling Risk

Some critical API endpoints incorrectly return a 200 OK status even when an error or failure scenario occurs, which can lead to confusing logic and integration failure on the frontend.

4. 💡 Final Recommendation

Conditional Go.

The application is functionally stable for end-users and can be deployed. However, the backend validation issues (Database and API risks listed above) must be immediately prioritized and addressed in the next development sprint to ensure long-term stability and data integrity.

5. ✍️ Sign-off

The report is signed off by the Team Leader, with all team members acting as collective Project Signatories.

Role	Name
Team Leader	Nagham Ahmed Mahmoud Saed
Team Signatory	Ahmed Gamal Hassan Ali Ghoneim
Team Signatory	Kareem Fareed Abd-Elrahman Fahmy
Team Signatory	Jana Mohamed El-Fateh Mohamed
Team Signatory	Alaa Ahmed Tolba Ashmawy
Team Signatory	Doha Ramadan Salah El-Khedewy
